## 2011 SEP 30 PM 2: 05 CALENDAR YEAR 2010 CONSUMER CONFIDENCE REPORT CERTIFICATION REPORT

# SOUTH VICTORIA WATER ASSOCIATION PWS ID # 0470069 SEPTEMBER, 2011

In accordance to the Federal Safe Drinking Water Act, the 2010 Consumer Confidence Report was prepared and distributed to the customers of the above Water System as follows:

Ø	Customers were informed of availability of CCR by:
	Advertisement in local paper  On water hills do
	On water bills of learner land
	Date customers were informed:
	CCR was distributed by mail or other direct delivery. Specify other
	direct delivery methods:  Date mailed/distributed:  Q-29-11
	Date maneuralstributed.
	CCR was published in local newspaper. (Attach copy of published
	CCR and proof of publication)
	Name of Newspaper:
	Date Published:
B	CCR was posted in public places_(Attach list/ôf locations) //
	CCR was posted in public places (Attach list/of locations)   7.27-11  Date posted: (Linux Lanch Locations)

### Drinking Water Quality Report South Victoria Water Association PWS ID # 0470069 September, 2011

We're pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source consists of two wells that draw from the Tallahatta Formation Aquifer.

A source water assessment has been completed for the water supply to determine the overall susceptibility of its drinking water to identify potential sources of contamination..Please contact the Water Association office if you wish to obtain a copy of this report.

We're pleased to report that our drinking water meets all federal and state requirements.

If you have any questions about this report or concerning your water utility, please contact Robert Griffin at 662-838-5298. We want our valued customers to be informed about their water utility. If you want to learn more, please contact Mr Griffin at the above number and a meeting will be scheduled to discuss this report.

South Victoria Water Association routinely monitors for constituents in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1st to December 31<sup>st</sup>, 2010. As water travels over the land or underground, it can pick up substances or contaminants such as microbes, inorganic and organic chemicals, and radioactive substances. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

TEST RESULTS										
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination		
Inorganic	Contan	ninants								
10. Barium	N		0.04	No Raange	Ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits		
14. Copper	N		0.2	None	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives		
16. Fluoride	N	:	0.6	No Range	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories		
17. Lead	N		9	None	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits		
Volatile (	Organic	Contami	nants							
Chlorine (as Cl2)	N	Dec to Jan	0.18 to 0.33	None	ppm	4	4	Water additive used to control microbes		

Monitoring and Reporting of Compliance Data Violation(s):
This past year South Victoria Water Association failed to comply with the CCR Report Rule in that we failed to distribute/post the report by the date required. The report was completed and posted. This did not pose a threat to the water system.

#### Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. South Victoria Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may which to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact 601.576.7582 if you wish to have your water tested...

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791). Please call our office if you have questions.
